

Thank you for your purchase of the Dual Charger. This intelligent charger for digital camera and camcorder batteries was designed with advanced switching power source technology, allowing you to charge your batteries at home or on the road. The charger is compatible with Li-ion rechargeable batteries of the brand and model listed on its packaging. Please read these operating instructions carefully before operating this equipment.

Product Features

- Adopted the latest advanced charging power management technology, creating new life idea for consumer.
- Smart and multi-function design.
- Super fast charger, its charging speed is three times faster than normal charger.
- It can charge two same or different batteries simultaneously.
- More than 200 kinds of optional detachable plates, charge various batteries for digital camera or camcorder, mobile phone etc.
- With 5V 2A USB output, it can supply power for iPhone, iPod, iPad, MP3 or MP4 etc.
- Flexible operation with advanced micro computer chips controlling, detect, switch and display the voltage or capacity automatically.
- LCD displays the charging status, such as battery capacity, charging voltage and USB output voltage etc.
- Safety protection: over charging protection, short circuit protection and over temperature protection

Overview

The top screen above will display when you first plug in the Dual Charger. Once charging begins, the screen will be similar to the middle display shown above. You can charge two batteries independently. When charge is complete, "FULL" will appear above the battery icon and the screen will display similar to the bottom illustration.

USB

You can use your Dual Charger to charge USB devices while you're also charging your digital camera or camcorder batteries. Plug the USB end of the devices's charging cable into the USB output jack on the side of the Dual Charger . The USB output is displayed on the LCD screen.

Test Button

You can test the charge state of your battery even with the Dual Charger unplugged. Just slide the battery into a second plate and press the TEST button. Press the TEST button a second time to display the voltage of the battery. After five seconds, the display will revert to showing the charge state.

If the charger does not charge the battery, check to see if the battery is dead, faulty or worn out. All rechargeable batteries eventually wear out after being used for a number of cycles.

Specifications

Input	AC 100-240V 50-60Hz
	DC 12-24V 10A
Output	DC 1.2-8.4V 2000mA(MAX) X2
	USB 5V 2A(MAX)
Charging Time	2-6 Hours
Operating Temp	0°C to 40°C
Storage Temp	-20°C to 60°C
Size	124x114x44.5mm
Weight	218g

Caution

- Do not store, place, or use the charger where it may come into contact with excess heat, water or moisture.
- Charge only on a vibration-free, dry surface at room temperature.
- Do not short-circuit the terminals of your battery or charger.
- Do not attempt to disassemble any part of the charger.
- Use this charger with the specified types of batteries only.
- The charger, adapters, and batteries may feel warm during the charging process. This is normal.
